SUMMARY

Great enthusiasm is conveyed for applying to the web developer role, aligning skills in HTML, CSS, and JavaScript with the mission to drive dynamic and interactive web solutions. A passion for innovative front-end development is demonstrated through projects like dynamic card generators and interactive web applications.

Comprehensive skills in creating user-friendly interfaces and effective event handling are highlighted, showcasing a commitment to delivering engaging web experiences.

PROJECTS

Hamburger Menu

- Implemented smooth scrolling, a hamburger Menu, and a contact form with form validation using HTML, CSS, JavaScript.

Dynamic Card Generator with Event Listener

- Built an interactive web page using HTML, CSS, JavaScript that allows users to dynamically generate new 'cards' on the page by clicking a button. Each card displays a unique number, which increments with each new card added.

Key Press Event Listener

- Developed an interactive JavaScript application that detects and displays the key and keycode of any key pressed inside an input box. This project demonstrates manipulation of the DOM and effective event listening.

Simple Calculator with Multiple Operations

- Developed a web-based calculator that performs basic arithmetic operations including addition, subtraction, multiplication, and division. This project demonstrates efficient event handling, input validation, and DOM manipulation using JavaScript.

Product Card App using React & DummyJSON API

- Developed a responsive product listing web application using React. Fetched and rendered product data from the DummyJSON REST API. Implemented dynamic rendering of product cards including image, title, and price.
- ◆ **Key Features:**
 - Used useEffect and useState hooks for API data fetching and state management.
 - Rendered multiple product cards using .map().
 - Applied responsive CSS for layout and design consistency.
 - Handled asynchronous data fetching with fetch() and async/await.
 - Separated components and styling for maintainability.
